

OKAN OZMAN

JR WEB DEVELOPER

PROFILE

I have been continuing my software development journey that I started in 2023 at full speed. Over nearly two years, I have been developing projects and expanding my expertise in React, React libraries and tools, JavaScript, CSS, HTML, Amazon Web Services, and the MERN stack (MongoDB, Express.js, React, Node.js).

I consider myself to be calm, mature, decisive, and solution-oriented when facing challenges. When it comes to software, I am genuinely eager, determined, and ambitious. Throughout my journey, I have learned everything on my own, tackling and overcoming various challenges independently. This self-taught path has strengthened my problem-solving skills and resilience, making me a stronger and more capable developer.

With this conviction, I aspire to assume a more active role in this sector as a Junior Full-Stack Developer. I firmly believe that I can bring substantial value to your projects and would be delighted to collaborate with you.

Project Links: [Github Repository](#) , [Live App](#)

Weather Application

Description: Details available on my portfolio site.

Technologies Used: React, CSS, HTML, AWS Lambda, AWS API Gateway, AWS Amplify, Node.js, OpenWeather API

Project Links: [Github Repository](#) , [Live App](#)

WORK EXPERIENCE

● Coca-Cola

2018-2022

Front Office Accounting and Archiving - Ankara, Turkey

While working as an archiving officer at Coca-Cola, I also provided support for front office accounting tasks. In this position, I systematically archived company documents and ensured that important financial records were kept in order. I assisted with financial processes, especially in areas such as invoicing and payment transactions. By developing methods to increase efficiency in archiving and front office accounting processes, I improved workflow.
